3. Doctor

Frequency of use— Every day

Domain expertise— Average

Computer expertise— Average

General goals — Generate final diagnosis from initial diagnosis

Personna

1. System Administrator

Gigi is in-charge of employees faculties who work at the MSU-IIT clinic. As the person in-charge, she has to make sure that no random person has access to the records in the clinic and no random person can assume the roles of people in the clinic. In order to make her work manageable, she wants a system where she can first add the doctor, nurse or patient to the system before they can actually sign up in the system.

2. Nurse

Iris is a nurse in the clinic of MSU-IIT. She is the one, patient go to first when they need to go to a doctor for check-up. She always first assess the patient and then she writes what the patient complains about. This is a tedious job especially when patients come crashing to the clinic. She would rather just have to input the patient's ID Number and then record the patient's complains.

3. Doctor

   Dr. Puts is the Chief Administrative Officer and Head Doctor of the clinic in MSU-IIT. As a doctor, Dr. Puts wants to review every appointment request in order to make sure that he is the right doctor for the patient's needs. This is to save time for both doctors and students.

Stories
1. As an admin, I want to login to the website so that I can access the system.
2. As a nurse, I want to login to the website so that I can access the system.
