<u>Charter</u>

Vision

   AnonCare lets users assess their health problems anywhere the user wants.

Mission

   To create a web application that gives the user the possible health problems based on the user's answers to the given health test.

Objectives
- Within one week after project initiation, the team has already sufficient data regarding health problems.
- Within three weeks after project initiation, the developers will already have a design and plan for the project's architecture.
- After 3 days, the developers will come up with a finalized product backlog and be also able to identify the critical path.
- 10 weeks and 3 days after project initiation, the backend will already be finished.
-
- 11 weeks and 3 days after project initiation, the frontend of the project will already be finished.
- Within 2 weeks after frontend is finished, the team will already be focused on testing the whole system.

Principles
- Data is secured between the user/s and his/her/their doctor/s.
- The system will return the most accurate diagnosis based on the user's inputs.
